

## Maths– 3 Star Challenge

The children have some counters

There are fewer than  
30 counters.

If I arrange the counters into groups  
of 5 there is 1 counter left over.

If I arrange the counters into groups of 8  
there are 2 counters left over.

How many counters do they have?

Use the clues to work out the total of the  
children's counters?

Show your method of working out this total in your book  
and then make up your own puzzle to share with your family  
or send it to us ☺
